

BOTTOM LIFTING SEE-THROUGH BASELOID HANDLING PACKAGE FOR AP- PLIANCES

Abstract

A bottom lifting see-through baseloid handling package for a major home appliance or similar product is provided. The package comprises a top cap, a bottom member and corner posts that form an enclosure having open sides to allow the product to be viewed. A plastic bag can be placed over the product and inside the bottom member and top cap. Since the baseloid handling flange is integrally formed in the bottom member, the packaged product is lifted from the bottom.
